Research Subjects Needed for Research Experiments on Visual Perception

Eye Movements, Visual Perception and Attention
PI: Martina Poletti, PhD

Research experiments will investigate the roles of eye movements in visual perception. All experiments will take place in the Active Perception Laboratory in the Center for Visual Science at the University of Rochester. Each experiment session lasts 1 hour (number of sessions ranges from 2-5 per week, with a total of 5-10 sessions depending on the experiment).

All experiments will use a Dual-Purkinje Image (DPI) eye-tracker. Some may also use an electroencephalography (EEG) cap.

Subjects will be paid $10/hour for their participation.

We are looking for English speaking subjects who are at least 18 years old and have 20/20 vision (no glasses or contact lenses).

RSRB-University of Rochester-Approval
Approved: 10/9/2018
Expires: 11/5/2019
