# Visualizing data in ggplot Day 5

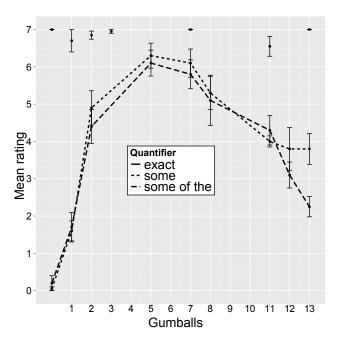

Judith Degen

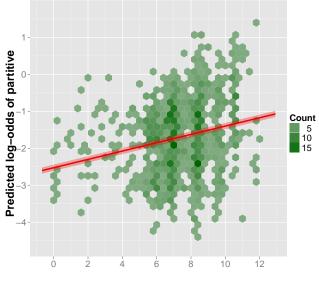

February 16, 2011

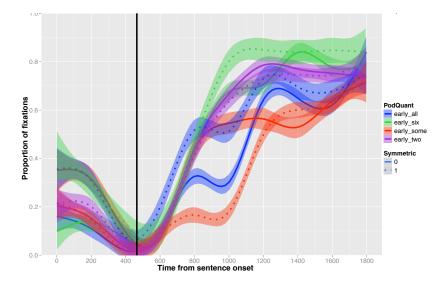

I(SOME | previous word)

# What's in a (gg)plot?

#### data

- geoms (geometric objects)
- stats (optional data transformation)
- scales (mapping of values in data space to values in aesthetic space)
- coordinate system
- facets (conditioning specification)

### Layers

- plots are organized in layers
- each layer has four components:
  - data and aesthetic mapping (controlled by scale)
  - statistical transformation
  - geometric object
  - position adjustment

# Today

- histograms
- density curves
- scatterplots
- line plots
- barcharts
